

Transform Your Project Success with TrueProject and CrossConcept Continuum

The Alarming State of Project Failures

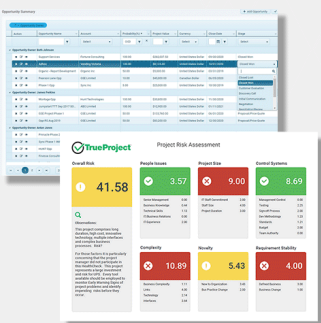

According to PMI's Pulse of the Profession - "Transforming the High Cost of Low Performance,"

Are you struggling with project delays and cost overruns?

The Solution? Streamlined and Predictive Project Management

Effective project management requires predictive intelligence to foresee potential issues, enhance decision-making, and improve overall project health. This involves integrating data from various sources, receiving real-time insights, better resource management, and fostering better team collaboration.

Introducing TrueProject and CrossConcept Continuum The Game-Changing Project Management Solution

The combined power of TrueProject and CrossConcept Continuum helps you elevate your project management to new heights. This strategic partnership combines the strengths of both platforms to deliver unmatched project visibility, efficiency, and success, transforming how your businesses manage and execute the projects.

TrueProject

TrueProject is a KPI-based predictive project management SaaS solution that improves project health and performance. It uses advanced warning, predictive intelligence, and AI to identify potential project issues before they become critical. By delivering automated project oversight and governance, you can take immediate action to ensure your projects stay on track and within budget.

CrossConcept Continuum

CrossConcept Continuum is an all-in-one unified project delivery solution that streamlines your project delivery to reduce costs and improve efficiency. With robust PSA and PPM solution capabilities, Cross Concept Continuum forecasts future project demands with role-based resource planning. This solution tracks time and expenses against budgeted projects to understand your costs and ensure profitability.

Are you wondering if our solutions align with your project needs, budget, size, and complexity?

CrossConcept Continuum

Trusted by Industry Experts

TrueProject has addressed the opportunity to manage projects with focus on performance and outcomes and provide predictive insights and gain the knowledge to the health of your operations.

- Mark Smith, Partner and Head of Software Research - ISG

Today's task and project management systems do a great job of telling you what has already occurred. Organizations that want to improve project success may want to consider solutions that predict issues that haven't occurred yet. This is that type of solution.

- Ray Wang, Founder, Chairman and Principal Analyst Constellation Research
